

Sitting the Right Way

1

Is your back flat against the seat, and

2

Are your knees bent at the edge of the seat with your feet flat on the floor, and

3

Is the lap belt low on the tops of your thighs (not on your stomach), and

4

Is the shoulder belt between your shoulder and neck, and

5

Will you sit still the whole trip?

If you answered “Yes” to ALL of these questions then you are buckled correctly.

If any of your answers are “No” you need to ride in the back seat.

If you are in the back seat, and you still answer “No” to a question, you need a booster seat.
